

Northeast Food Systems; Water Quality; and Energy

April 2011

Charge:

1. Develop a strong CAP's grant proposal around the area of specialty crops that builds on the competitive advantage of the Northeast states.
2. Engage the Northeast land-grant universities and other potential partners in defining a comprehensive proposal that combines strengths in local food systems, ethnic and other niche markets, Good Agricultural Practices (GAPs), global food security, sustainability, and human nutrition.
3. The proposal should have a strong component on the human dimensions associations with adoption of local food systems.
4. The team should also consider supply chain issues, agro-tourism possibilities, rural development, network science, demographic shifts, food deserts, and urban-rural connections.
5. The proposal should be developed with extension as the lead but include strong research and/or resident education objectives.

Dr. Margaret E. Smith – has extensive extension experience, served as an Associate Director for Cornell Cooperative Extension for a few years and is now half time with the experiment station and half time in her department as the Department Extension Leader. Excellent team player. Has also been involved in a large proposal to fund “food systems” research.

Professor, Department of Plant Breeding & Genetics, Cornell University
